TIGON
TECHNOLOGY

 **HUDDIG**

 **HUDDIG**

Technology that changes an entire industry.

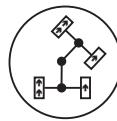

At Huddig, we always strive to make the best even better. And that's exactly what we have done with our new HUDDIG TIGON.

With our revolutionary Tigon Technology we are changing the entire industry within construction machinery and enabling completely new ways of working – ways that make your job more efficient, sustainable and profitable.

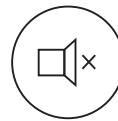

Step into the future today with Tigon Technology. Whether you buy a Tigon or a 1260E from us, you take part in the future. Our concept development leads series production.

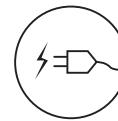

The revolutionary Tigon Technology makes it possible to achieve up to 30% greater output than the diesel engine alone is able to produce.

The four individual EMG motors enables 100% four-wheel drive, the best possible grip and minimal ground impact.

In electric mode, the Huddig Tigon is virtually silent. Work at night or even indoors.

You can choose whether you want to drive only with the diesel engine or on electric drive. For maximum power output, you can combine both.

Tigon technology lowers your fuel costs from day one, which increases your profitability and overall economy.

The smart hybrid technology reduces your climate impact and protects the global environment.
