

# ONBOARD WEIGHING

# THE APPROVED LEGAL FOR TRADE SYSTEM

Beware of non-legal for trade systems: they are illegal.

The **helper21** onboard weighing system has been approved as guaranteeing stable weighing performance under the following conditions:

- Changes in ambient temperature.
- Resistance to vibration.
- Electromagnetic interference.

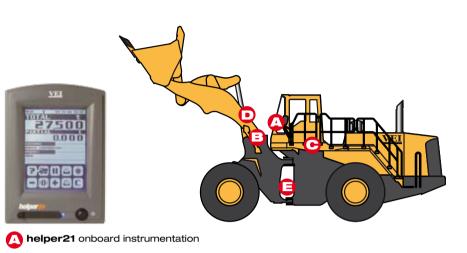

**helper21** has therefore been approved for payload weighing under the latest applicable European standards and regulations.

**helper21** is the most powerful weighing system for wheel loaders and similar equipment; it has an integrated touchscreen and new construction technologies that enable you to manage more data faster than ever. With **helper21**, the office is now connected to your wheel loaders via a wireless connection.

# Much more than a weighing system

**helper21** is not just a weighing tool but an all-in-one payload management system combined with a modern, userfriendly interface making it the stateof-the-art in the industry and most advanced on the market.

# THE MOST POWERFUL, ALL-IN-ONE SYSTEM ON THE MARKET. APPROVED LEGAL FOR TRADE.

### Why install helper21?

• End-to-end management of the payload process, with print-out of the delivery tickets and data sent to billing system in real time using wireless cellular technology.

• Real time, web-based consultation of loading and production data from any work station.

• Easy-to-use thanks to the intuititive commands and guided data-entry user interface made possible only because of the touchscreen display.

- Find function to search lists.
- Operator ID recognition with autolocking if not authorized.
- High-speed thermal printing.
- High precision and legal for trade.
- Minimum components with no junction boxes.

• No similar product available: an onboard computer that weighs, prints delivery tickets, sends data to billing system and legal for trade.

• Weigh bridges and associated running costs can be eliminated.

• The production plant can be loaded then suspended temporarily to load trucks. The system can manage up to 50 simultaneous loading tasks (multitasking).

EFFICIENCY

### **Printers (optional)**

### eprint

The eprint unit prints delivery tickets and production results. It can be fitted under helper21 to produce a single, integrated unit or installed as a separate unit. The information printed on the delivery tickets includes the following full address details:

• Owner of site

- Loading site
- Company loading
- Carrier
- Customer
- Destination

Along with: product with relative CE notes, loaded vehicle registration number, weights (tare, gross and net), operator name and space for signature. Eprint also prints your company logo and certification bodies for the product being loaded.

### Slip printer

The Slip Printer generates multiple copies of delivery tickets in a pre-printed format. The information printed on the delivery tickets includes the following full address details:

- Owner of site
- Loading site
- Company loading
- Carrier
- Customer
- Destination

Along with: product with relative CE notes, loaded vehicle registration number, weight, operator name and space for signature.

### Sprint

Sprint is the smallest printer and ideal for use in smaller spaces. It prints the following full address information:

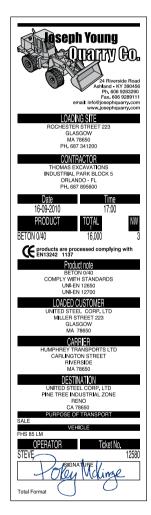

- Loading site
- Company loading
- Carrier
- Customer
- Destination

Along with: product with relative CE notes, loaded vehicle registration number, weights (tare, gross and net), operator name and space for signature. It does not print company or product logos.

ipot (optional)

Loading data analysis software. Whether you use the **ikey** memory stick or wireless connection, all data ends up in a single database from where it can be exported to billing software. With **ipot**, you can generate all types of reports, and printouts can be launched directly and in real time from the loading machine to your office. **ipot** links sales to billing cutting administration times drastically.

### ikey (optional)

Portable USB memory device to transfer data: an easy option in your pocket to keep your business always up to date, or back up all files saved in the weighing system.

### wireless (optional)

### **TrackWeight Mobile**

Stay connected to your loader 24/7, 7 days a week. Trackweight sends you real-time data from your loader wherever

you may be, all you need is an internet connection. Its compact function gives you:

- Production data at a selected email account.

- 100% data security as data is sent in real time and stored on a server provided for you.

- Automatic and direct billing without having to enter delivery tickets manually after they are printed on the loader.

- Easy management of all extraction sites located in and outside the country.

### 21RFlink

Ideal for short distance data transmission or in the same site where the loading machinery is working.

21Rflink is in fact used when delivery tickets need to be printed at the exit of the loading site or inside industrial plants in order to transfer data in real time.

# WIRELESS TRANSMISSION

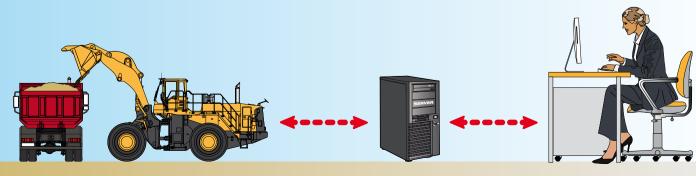

TrackWeight Mobile Quad-band cellular modem. Real-time data transmission. Unlimited range. Unlimited number of loading sites manageable.

21RFlink 868Mhz radio modem Real-time data transmission 1000m range 1 loading site manageable.

operator-assisted ipot kiosk

### ipot kiosk (optional)

The ipot kiosk brings unparalleled automation to the sector, cutting running costs drastically and paying for itself in just a few months.

With ipot kiosk, vehicles entering the loading site, whether it's a quarry, construction site or landfill site, are controlled through manual or automatic vehicle recognition. This provides direct control over all vehicles operating in the site, and the opportunity to deny authorization as necessary. But ipot kiosk is not just a simple access control system, as once a vehicle has been recognized, all associated data, such as the customer name, vehicle registration number, weight and product is sent as a message to the assigned vehicle. This means the driver no longer needs to get out to give these details to the loader operator, and the latter doesn't have to enter data for the vehicle being loaded because it is already contained in the message received when the vehicle entered the site. Once the vehicle has been loaded, the loader operator sends a message to the ipot kiosk specifying the weight actually loaded so when the

vehicle is recognized at the exit, the driver receives the delivery ticket automatically.
